

## **ABSTRACT**

The invention relates to a method for producing multi-segment filters for the tobacco processing industry, wherein filter segments (1, 7) are delivered to a group of filter segments. The method is developed by introducing a medium (3) into the filter segment (1) before they are delivered to a group of filter segments. The invention also relates to a module of a multi-segment filter machine for the tobacco processing industry, wherein filter segments can be delivered to a group of filter segments and a multi-segment filter machine for the tobacco processing industry.
